Employment History Highlights

For a more detailed history, please visit my website or LinkedIn profile.

Software Engineer — Ezoic, Carlsbad CA (*remote*)

MAY 2021 - DECEMBER 2022

Worked on a wide variety of front- and back-end systems/tools, for both internal and external customer use.

Main technologies: Amazon Web Services (AWS), CSS, Git, Go, HTML 5, JavaScript / TypeScript, MySQL, PHP, Vue

Front-End Software Engineer — Study.com, Mountain View CA (*on-site/remote*)

NOVEMBER 2019 - FEBRUARY 2021

Responsible for creating and updating a variety of external site pages as well as internal tools. Mainly work on front-end portions using JSP, Typescript, AngularJS, and Less, but occasionally need to work with Java code, Selenium, and MySQL.

Main technologies:

AngularJS, Bootstrap, CSS / Less, Git, Gulp, HTML 5, Java, JavaScript / TypeScript, JSP / JSTL, MySQL, RequireJS, Selenium

Senior Web Developer — Renovate America, San Diego CA

MAY 2015 - APRIL 2017

My first team at RA was focused on an internal-facing toolkit for the call center. Much of the work focused on transferring functions from an outdated native Java desktop app to the web app.

Most of the front-end work was in AngularJS (1.x) and Microsoft .NET Razor. Occasionally, I needed to modify the C#-based API.

One major project was creating an interface for adding products to a customer's project, moving it from a jQuery-heavy independent page to an integrated part of the larger toolkit. The leaders of the call center were happy with the new interface, noting that it would make their duties much easier.

The second team maintained the customer-facing marketing website. This site was built on SiteCore for content management, and also included AngularJS and Razor in the front-end stack.

Main technologies: AngularJS (1.x), Bootstrap, CSS / Sass, Git, Gulp, HTML 5, JavaScript, Kendo UI, Microsoft .NET Razor, Microsoft C#, Microsoft TFS

Web Developer — Best Buy, Richfield MN (*contract*)

SEPTEMBER 2013 - MARCH 2015

I was part of a small development group working on the analytics for the main BestBuy.com website. Working with the UI/UX developers, we would take in information from the site and package it to send to Adobe Analytics for tracking.

At one point we completely overhauled our codebase, moving from two large, mostly duplicated, jQuery-infused files to a module-based framework using RequireJS and integrated the new framework with Signal Tag Manager.

Main technologies: Adobe Analytics, Git, HTML, JavaScript, Jenkins, jQuery, Lodash, RequireJS, Signal Tag Manager

Web Developer — Digital River, Minnetonka MN

FEBRUARY 2011 - SEPTEMBER 2012

Working within an in-house content management framework, I worked on customized e-commerce sites for Digital River clients. We completed a complete design of THQ's store, including an integrated single sign on.

Main technologies: CSS, HTML, JavaScript, XML / XSLT, YUI

Web Developer — Internet Broadcasting, St. Paul MN

JANUARY 2008 - FEBRUARY 2011

Internet Broadcasting (now known as Lakana) is an online publisher for media companies, specializing in television station websites. I worked on front-end enhancements for various properties, developing within an in-house content-management framework.

While the lead front-end developer for the Cox Media sites, I was responsible for (among other projects) the implementation of Adobe Analytics tracking code across their sites as well as adding a new ad unit framework.

Main technologies: CSS, HTML, JavaScript, XML / XSLT, YUI
